# Super Analog Stylus Series <span>JICO's Original High Quality and Long Life Model</span>

SAS (Super Analog Stylus) is our original record stylus which has a special shaped tip that achieves linear contact while also reducing friction between the sound groove and needle tip at the same time. The impressive result is an excellent reproduction of the treble and bass from an analog record, as well as a longer playing time of approximately 500 hours.

Analog record production requires a master disc that is cut on a dedicated lathe. The SAS stylus tips are laser cut to resemble the needle tip used on a cutting lathe. This enables the SAS tip to reach the deepest sections of a record's sound groove and collect sounds that standard needles cannot. Because the sound groove's contact area is big, an accurate sound recording will be reproduced across a wide frequency range.

## SAS/B    Boron Cantilever
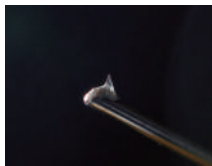

There are many customers who believe that this model is well suited to use for articulating delicate sounds like those present in classical music. An aluminum cantilever is unable to reproduce the original sound groove information as accurately and faithfully as the SAS Boron. The average playing time for this model is about 500 hours.

## SAS/S    Sapphire Cantilever
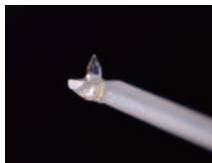

This model has high degree of rigidity which improves the reproducibility of sound recorded from an analog record. This concept has been characterized by many customers as greatly improving the perception of the sounds and vocals on a record. Compared to the Boron version (SAS/B), the impression of the Sapphire Cantilever is closer to high-resolution sound. The typical playing time for this

# MORITA ~Wood Carving Cantilever~ <span>Cantilever crafted from wood</span>

"I wanted to hear what a record needle with a wooden cantilever sounded like."
The words of Kotaro Morita, a quiet record needle maker that inspired this invention.
Morita has worked with JICO for over half a century and has always prioritized "Monozukuri*1" We've chosen to introduce a product named after him in order to preserve his spirit, abilities, and accomplishments for future generations.

*1 Monozukuri is the Japanese philosophy of craftsmanship, where skilled artisans create objects with precision, patience, and respect for tradition. It values mastery of techniques, simplicity, aesthetics, and a connection to both the past and future, resulting in handcrafted, beautiful, and functional pieces.

## KUROGAKI    Cantilever made from Black Persimmon Wood

Japanese Black Persimmon wood is used to make the cantilever, which is very rare and valuable. The conical tip used for this stylus has an average play time of roughly 200 hours.
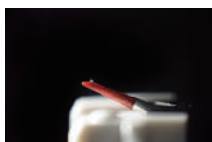

## USHIKOROSHI    Cantilever made from Christmas Berry Wood

This product has an appealing mid-bass sound that is tense and powerful, making it suitable for music with a lot of intensity. The conical tip used for this stylus has an average play time of roughly 200 hours.
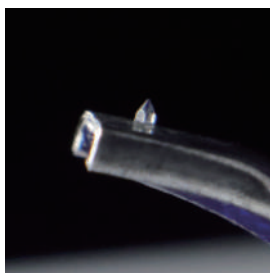

## YURUSHI-IRO    Cantilever made from Pink Ivory Wood

Each individual sound is very delicate, with excellent clarity in the high tones, and it is characterized by a beautiful and transparent overall sound. The conical tip used for this stylus has an average play time of roughly 200 hours.

# NUDE Stylus Series

Stylus tip is structured entirely from Diamond

In contrast to bonded tips, NUDE (solid) tips are entirely made of diamond. Its angle and round shape are similar to a bonded tip, but its diameter is equal in size to that of the SAS series.

\* Models featuring the word "NUDE" in the product name are those with Solid Diamond Tips.

### ▶NUDE Conical Stylus   Universal Model for Comprehensive Sound Reproduction

Stylus tip with standard conical shape (tip R0.7mil).
The average playing time is about 200 hours.
bass from an analog record, as well as a longer playing time of approximately 500 hours.

### ▶NUDE Elliptical Stylus   Model Featuring Extended High-Frequency Treble

Compared to the NUDE Conical Stylus, this needle tip has an Elliptical-shaped cross section when being made. This is to increase and enhance the treble range's extension.
The average playing time is about 150 hours.
bass from an analog record, as well as a longer playing time of approximately 500 hours extension.

# SD Stylus Series

Synthetic Unplated Diamond Tip
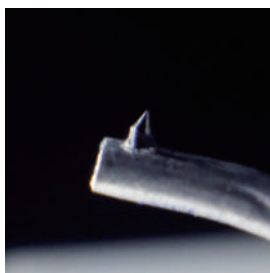

Synthetic Diamonds refer to diamonds that are artificially created and possess the same chemical composition, crystal structure, as well as optical and physical properties as natural diamonds.

In contrast to Natural Diamonds (ND), which are formed naturally and can vary in hardness from one individual to another, synthetic diamonds are referred to as Synthetic Diamonds (SD) because they offer the advantage of consistent hardness.

| | Point contact stylus | | Line contact stylus |
|---|---|---|---|
| | Conical stylus 0.7mil | Elliptical stylus 0.3mil x 0.7mil | SAS stylus |
| Front View | 13μR | 18μR | 75μR |
| Cross-sectional view | 13μR | 6μR | 2.5μR |
| Contact with records | L¹3.3μ / 3.3μ | L¹4.5μ / 2.5μ | L¹9μ / 1μ |
| Contact surface | 23.4 μm² | 20.6 μm² | 62.1 μm² |
| L₁ / L₂ | 1 | 1.8 | 9 |

The greater the difference between the cutting of the sound groove of a record and the shape of the stylus tip, distortion does not occur even with high-amplitude playback.

Shibata sylus
Elliptical sylus
Conical sylus
Direction of record rotation

# DJ Series

To avoid the stylus from skipping or jumping during scratching on a turntable, the needle pressure for the "DJ SERIES" is calibrated at a higher tracking force than that of genuine stylus. A luminous - glow in the dark type (AURORA) version is also available, which looks fantastic when DJing in a club.

In addition, the N44 series products have a cantilever that is designed to be similar to SHURE's genuine product.
1. The cantilever round form
2. The height from the record surface to the base of the cantilever

# Cartridge

The cartridge is compatible with both genuine SHURE N44 models and JICO replacement styli.

## J44  Compatible with SHURE N44 styli

### J44D

Produces a well-balanced, solid sound with a broad, smooth tone and a 3D-like audio effect. The specifications are similar to the genuine SHURE M44G cartridge.

### J44A 7

Delivers a lively sound with vigorous dynamics. Reproduces powerful basslines while maintaining a well-balanced sound. Comparable in specifications to the genuine SHURE M44-7 cartridge.

## J50  The "J50" MM cartridge for Listening/Play Back

Designed for audiophiles and record-listening enthusiasts, this MM Cartridge offers higher output compared to the "J44D" and "J44A 7" models. The calm, transparent brown body comes with various kits, each featuring 1 to 3 different styli, allowing you to fully experience the diverse sound profiles of the JICO CUSTOM SHOP collection. Available styli for the J50 include the "N-44-7 IMP NUDE" and the MORITA Wood Cantilever models—N44 KUROGAKI and N44 USHIKOROSHI

## IMPACT  DJ Use and Performance

The IMPACT cartridge crafted for DJ use features a clear red transparent body and utilizes the JICO N-44-7 DJ IMP NUDE and/or SD Conical Stylus tips, delivering a powerful "PUNCH" to the low end of the sound reproduced from a record groove. An OMNIA pre-assembled complete set is also available, which includes JICO Black or Silver Headshells.

# SETO-HORI REMODEL

Traditional Japanese craftsmanship and Cutting-edge engineering with MC cartridge

Released in 2019 the SETO-HORI, received widespread global recognition. The new name for this continued legendary product will be the "SETO-HORI REMODEL," which emphasizes integration of the cartridge with the headshell for a true precise sound.
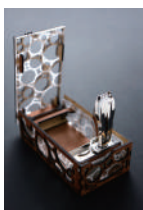

The headshell and cartridge's center of gravity, which are machined from aluminum and copper alloy ingots, are positioned directly on the tonearm's centerline for maximum sensitivity when tracing a record. Additionally, the screw-free integrated body allows for a lower degree of coarse resonance.

SETO-HORI REMODEL is a unique technological fused balance of Traditional Japanese craftsmanship and Cutting-edge engineering.

# ARTIST SERIES

## BASIE MODEL    Jazz cafe "BASIE" supervised by Shoji "Swifty" Sugawara BASIE

JAZZ KISSA (CAFE) BASIE is the most popular Jazz cafe in Japan.
We have developed a "BASIE" model with Shoji Sugawara the owner of Jazz cafe BASIE

### ▶VN35EBN

Jazz cafe "BASIE" operated by Shoji "Swifty" Sugawara BASIE, is a long-established Jazz cafe located in Ichinoseki City, Iwate Prefecture, a famous place visited by many music enthusiasts and celebrities. Mr. Shoji Sugawara has been the owner of the cafe for 50 years, and after a long period of development, trial and error, we have finally achieved the precise sound that he has been pursuing.

## ALFA MODEL    ALFA Music 55th Anniversary Collaboration

### ▶ALFA MODEL55 / OMNIA

"Sure to Capture Your Heart with Sound"
A High-Grade model featuring natural, uncut diamonds. Crafted to faithfully reproduce each sound with clarity compared to standard models. Limited to 550 units. Every cartridge and stylus are individually assigned a serial number.

### ▶ALFA MODEL / OMNIA

"The Sound of Artist-Centricity"
An entry-level model featuring Synthetic uncut diamonds. Crafted to recreate the sound of music released by ALFA Music at the time.
